Dear Hiring Manager,

I hope this finds you well. My name is Will and I recently graduated from *Academy* of Interactive with an Associates Degree in programming, specializing in Game Development. I am writing to express my excitement and interest in the Software Engineer position at Digital Extremes. I am a passionate gamer and have always been captivated by the great experiences Digital Extremes creates. Furthermore, I believe that my educational background, my substantial experience with Unreal Engine and Unity, and my passion for gaming equip me to make valuable contributions to your team.

I have been playing Warframe since it dropped on the PlayStation store. I've always loved the free to play module, sell the appeal and they will come. The other fact that this company actually cares about the people that community that supports the content.

I first played: "Dark Sector", I played it on the Xbox back when I was a kid. I got such a euphoric feeling when I played it. The story just drew me in, when you try to get back the organization for corrupting your arm. Very exciting!

It won't just be a great opportunity for me, but a great pleasure to join the team at Digital Extremes.
